## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6 and 20 are drawn to the validity of management frames such as deauthentication messages in a wireless network.
  - II. Claims 7-12 are drawn to probe request identification and modification in a wireless network.
  - III. Claims 13-17 are drawn to setting up a plurality of RSSI thresholds in a wireless network.
  - IV. Claims 18-19 are drawn to creating and providing an access point list to a requesting device in a wireless network.

The inventions are distinct, each from the other because of the following reasons:

Inventions I., II., III. and IV. are directed to related different functionality and inventive concepts. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed different functions and inventive concepts. Furthermore, the inventions as claimed do not encompass

overlapping subject matter and there is nothing of record to show them to be obvious variants.

2. Because these inventions are independent or distinct for the reasons given above and there is a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See form 892.
